

IN THE ABSTRACT:

Please replace the present ABSTRACT on page 19 with following ABSTRACT.

A system, computer program product and method of displaying local and remote data objects and of interacting with same are provided. A local model defining at least one local data object and at least one local action which may be performed on the local data object is used. Likewise, a remote model defining at least one remote data object and at least one remote action which may be performed on the remote data object is used. The at least one local data object and the at least one remote data object are displayed in a viewer. In response to a selection of a data object from the viewer, a location characteristic for the selected data object is determined. Based on the determined location characteristic for the selected data object, at least one action is performed on the selected data object, as defined by one of the local model and the remote model.
